

more MMDA.

Martin
150 mg
11:45AM
~Aug 1965

Details onto page 118

general comment - gentle - like pot
not hard - like CO₂, LSD

at noon (15 min)

some nausea - methedrine effects

(30 min) LSD effects in the camp-fire.
felt withdrawn - had cramps in stomach (as with LSD) - the
visual field was lightened with eyes closed.

(1-1.5 hrs) - time slows. - geometric patterns. excess light
kills the eyes-closed patterns

- there is chest numbness, warmth - some vertigo
with eyes open.
- No taste in mouth (LSD yes, mescaline no)
- passive introversion
- people appear on beach - no paranoia (LSD yes)
- After images bright - long lived - 3D corridors, faces
upside down - dry mouth only slight (LSD dry dry)
- Some color effects, telepathic maybe - feels could
be useful as an introductory drug.
- Benign - can turn on and off.
2 types of hallucinations
 - ↳ retinal (looking as into a basket)
 - ↳ occipital (whole field)

♀ Same
time

150 mg easy in, easy out; (garrulous, withdrawn)

♂ Greg

150 mg Time disorientation (6 hours duration)
afraid to drive car. This report in
original words
page 117

He mentions Exodus Chap 30 p. 23.
