

This from M. Brady ~11/10/65

MMDA

the patient is a 33 yr old male 225 mgs taken

I had a strange awareness of my hands in about 20 minutes; not a feeling in them so much as just that I was attracted to them somehow; in a few minutes I began to get fearful-of ? loneliness of the acute experience of aloneness, I did not want to go back there again.

I laid face down (often a depressed position for me) Next I remember talking to the kids at school (an image) or to other teachers; this was very vivid; the scenes at school were more vivid than those in the office where I actually was. and the people more real than YOU. I tried to 'come back' by getting physically close to YOU. but still drifted off to school I was very sleepy throughout (not the alerting effect of LSD) and four hours later went immediately to sleep (I never did with LSD) I was bothered by the quality of reproduction of the music from 20 to 60 minutes after drug was taken - the crowded small office bothered me at first

of any experience I have had this was the most like a series of dreams easily remembered (this drug is most sought after by our helpers in drug work - they function best on it as helping others) I felt after it was over as I had after a long period of sleeplessness - I had gone to bed and had a series of dream like states very vivid and colorful and real

[see page 121](#)

*This pt had the pendular nystagmus
[with] this Drug Dosage.*
